Part V – Vietnamese Survivors: Loss, Resilience, and Reconstruction

Introduction – The Lives That Continued After the War

By Frank Dumon & Kiều Bích Hậu

Wars are often remembered through battles, military campaigns, political decisions and the names of those who commanded them. Yet the deepest consequences of war are frequently found far from the battlefield: in a family waiting for someone who never returned; in a mother raising children alone; in the memories of a child who learned the meaning of fear before understanding the reasons for conflict; and in the difficult work of rebuilding a home, a village and a future.

For the Vietnamese people, the end of the war in 1975 was a historic turning point. It did not, however, immediately end the hardship that war had brought into individual lives. Bereavement, displacement, damaged communities, disrupted education, health problems and the search for missing relatives continued long after the fighting stopped. Alongside these burdens came the immense task of reconstruction: restoring daily life, supporting families, rebuilding institutions and creating opportunities for the next generation.

This part of *The Price of Illusion* turns from the perspectives of American veterans to Vietnamese experiences of war and its aftermath. It does not seek to reduce millions of different lives to a single national story. The memories of civilians, former soldiers, women, children, volunteers and families are not interchangeable. Their circumstances differed by region, generation, occupation and personal experience. What unites them within these pages is the right to be heard in their own voices.

Beyond the Battlefield

Military history helps explain where and how a war was fought. Human testimony helps us understand what the war meant to those who lived through it. A battle may occupy a few pages in a historical account, while its effects can shape a family for

decades. The destruction of a house is measurable; the loss of a parent, a childhood or a sense of security is harder to record.

The Vietnamese experience includes acts of extraordinary courage and sacrifice, but it also includes exhaustion, doubt, grief, hardship and the quieter forms of endurance that seldom appear in official histories. A complete account must make room for all of these experiences. It must recognize that survival is not always a story of triumph. Sometimes it means carrying a loss that cannot be repaired while still finding a way to live.

Women, Families and the Burden of Survival

Women were not merely witnesses to the war. Many took part in military and logistical work, served as youth volunteers, sustained households and communities, cared for the wounded and assumed responsibilities that continued long after the conflict. Others bore the consequences of separation, widowhood, disrupted livelihoods and the long uncertainty surrounding missing family members. Their stories deserve attention not as an appendix to military history, but as an essential part of Vietnam's history in their own right.

Children experienced the war differently. Some lost parents or homes; others grew up amid evacuation, scarcity or repeated interruptions to ordinary life. Many later became adults responsible for rebuilding a country whose hardships they had inherited. To understand reconstruction, we must ask not only what was rebuilt in physical terms, but also how families restored education, trust, care and a sense of belonging.

Vietnamese Veterans and the Return to Civilian Life

Returning from military service did not necessarily mean leaving the war behind. Former soldiers had to resume family and community life, find work, live with memories of comrades and confront the material and emotional consequences of their experiences. Some returned to familiar places transformed by conflict; others faced injuries, illness or the absence of those who had once shared their lives.

Part IV examines the experiences and moral dilemmas of American veterans. The purpose here is different. Vietnamese veterans speak from their own historical and social circumstances. Their recollections should not be forced into an artificial symmetry with American accounts, nor should the experiences of any individual be treated as representative of every Vietnamese soldier. Each testimony must be understood on its own terms.

The Long Shadow of War

For many families, the search for missing relatives and the care of graves remain inseparable from remembrance. In some areas, unexploded ordnance continues to affect the relationship between people and the land on which they live and work. The health and environmental legacies of wartime chemical exposure are also part of the wider history of suffering and recovery. These subjects require particularly careful documentation, precise terminology and attention to the people directly affected.

Statistics can establish the scale of a tragedy, but numbers do not tell us how a family experiences it. This book will therefore place verified historical evidence alongside individual accounts, without allowing either to replace the other. Where facts are uncertain or memories differ, that uncertainty should be acknowledged openly.

Reconstruction as a Human Achievement

Reconstruction is often described through roads, factories, buildings, agricultural production and economic growth. These achievements matter, but reconstruction also begins at a smaller scale: a school reopening, a family cultivating its land again, neighbours helping each other, a wounded veteran learning to work in a new way, or parents giving their children possibilities that they themselves never had.

Vietnam's postwar transformation belongs to those who undertook this daily labour as well as to the leaders who shaped national policy. The voices of teachers, farmers, workers, medical personnel, former youth volunteers and community organizers can illuminate dimensions of reconstruction that official figures alone cannot capture. Their experiences can show how social bonds, local knowledge, initiative and persistence helped sustain communities through difficult decades.

Resilience, however, should not be used as a comforting word that diminishes the seriousness of suffering. To admire someone's strength is not to suggest that the suffering was necessary, or that every wound has healed. The purpose of these chapters is to give equal weight to what was lost and to what people managed to rebuild.

Memory Across Generations

Those who experienced the war directly carry memories that younger Vietnamese know through family stories, education, memorial sites, literature, photographs and public remembrance. These generations may ask different questions about the past. For some, remembrance is bound to personal loss; for others, it is part of

understanding the country they have inherited and the future they wish to create.

Listening across generations can reveal not only what has been remembered, but also what has been difficult to say. Silence may reflect grief, modesty, exhaustion or a desire to protect children from painful memories. A respectful interview must leave room for such silence. No witness owes the reader a dramatic confession, and no life should be simplified merely to fit a predetermined narrative.

A Book Built Around Vietnamese Voices

This part will be developed through historical research, documentary evidence and, most importantly, conversations with Vietnamese people who are willing to share their experiences. The selection of witnesses and the interpretation of their testimony require cultural understanding, linguistic sensitivity and trust. Kiều Bích Hậu's knowledge of Vietnamese society, her literary experience and her relationships with potential contributors are therefore central to the work.

Our responsibility as co-authors is to listen carefully, preserve the meaning of each testimony and distinguish a witness's own words from our historical commentary. Names, dates, places and factual claims will be checked wherever possible. Interviewees' wishes regarding identification, sensitive personal information and publication will be respected. Translation should carry not only the information in a statement, but also its tone, dignity and cultural meaning.

The result we seek is neither a collection of heroic slogans nor an inventory of suffering. It is a human portrait of a society that endured profound losses and continued to change. These pages belong, above all, to the people whose lives give the history its meaning.

From Survival Toward the Future

The survivors of war do not live only in the past. They have raised families, worked, created, remembered, mourned and helped shape contemporary Vietnam. Their experiences connect the history of conflict with the questions of responsibility, memory and reconciliation that follow in Part VI.

If Part IV asks what American veterans came to understand about the war they fought, Part V asks what Vietnamese people endured, what they rebuilt and what they wish future generations to remember. The answers cannot be written in advance. They must emerge from the voices of those who lived the history.
